

FOR IMMEDIATE RELEASE

Bell Federal Systems Awarded NASA SEWP VI Prime Contract

SPRINGFIELD, Va., June 23, 2026 — Bell Federal Systems, Inc. (BFSI) proudly announces its award under NASA's Solutions for Enterprise-Wide Procurement VI (SEWP VI) Government-Wide Acquisition Contract (GWAC), one of the federal government's most prestigious and sought-after technology acquisition vehicles.

NASA SEWP VI is the federal government's premier GWAC for information technology products, software, cloud solutions, cybersecurity, artificial intelligence, and IT professional services. Managed by NASA and available to all federal agencies, SEWP VI streamlines the acquisition of technology solutions across the government. The contract vehicle is expected to support approximately \$60 billion in federal IT spending over its 10-year term, building upon the success of SEWP V, which generated more than \$62.8 billion in obligations.

SEWP VI is widely recognized as one of the most strategically valuable contract vehicles in government contracting because it provides contract holders direct access to recurring federal IT spending from virtually every federal agency. Winning a SEWP VI prime contract places Bell Federal Systems among an elite group of contractors eligible to compete for significant federal technology requirements over the next decade.

"This award represents a transformational milestone for BFSI," said Adrian Bell, President and CEO of Bell Federal Systems. "After more than two years of anticipation and a highly competitive evaluation process, we are honored to receive a SEWP VI award. This achievement reflects our commitment to helping government agencies modernize operations through innovative technology, acquisition support, and mission-focused services."

Through SEWP VI, BFSI will provide technology and professional services supporting artificial intelligence, cloud computing, cybersecurity, enterprise software solutions, acquisition and financial management, program management, records management, managed services, and digital modernization initiatives.
